NOVASOUND

Brand Governance Guidelines

Enhanced demonstration policy for video, audio, captions and social-media content review

Document version	2.0 — Multimodal review edition
Brand	NovaSound — fictional music-streaming technology brand
Intended use	Testing BrandGuard AI guideline extraction and multimodal compliance analysis
Applies to	Short-form videos, video scripts, thumbnails, social captions and campaign graphics

Purpose: provide clear, testable rules with observable evidence. This guide separates video-frame checks, spoken-transcript checks, caption checks and post-publication checks so BrandGuard does not treat one content source as another.

Important test note

NovaSound is fictional. These rules are a controlled test policy, not real-world legal, platform or trademark guidance. Upload this PDF as a new guideline in BrandGuard AI and select the newly created guideline when testing videos.

1. Brand identity and visual system

The visual identity must remain consistent across video frames, thumbnails and campaign graphics. Use the official assets and values specified below; do not infer or substitute brand assets.

Approved identity reference

Element	Approved specification
Primary colour	Midnight Navy — HEX #14233B
Secondary colour	Signal Blue — HEX #2563EB
Accent colour	Wave Teal — HEX #0F766E
Background	White — HEX #FFFFFF or Mist — HEX #EFF4FA
Typography	Inter for headings; Inter or Arial for body copy when Inter is unavailable
Logo	Use only the approved NovaSound logo supplied by the brand owner. Do not redraw, recolour or distort it.

Rule 01 — Logo placement

Severity: High **Check type:** visual

Requirement: On every campaign video frame and thumbnail where the logo is displayed, place the complete approved logo in the top-left safe area. Keep it at least 5% of the canvas width away from the top and left edges. Do not place the logo at the top-centre or bottom-right.

Review evidence: Inspect sampled video frames or the supplied thumbnail for logo position, visibility and edge spacing.

Rule 02 — Logo integrity

Severity: High **Check type:** visual

Requirement: Do not stretch, rotate, crop, recolour, outline or add effects to the approved logo. Preserve its original aspect ratio and use the supplied brand asset.

Review evidence: Inspect visible logo shape, proportions and colour. If the official source asset is not supplied for comparison, report uncertain identity matching as unverifiable, not a confirmed violation.

Rule 03 — Brand colour palette

Severity: Medium **Check type:** visual

Requirement: Use Midnight Navy #14233B as the primary brand colour, Signal Blue #2563EB as the secondary colour and Wave Teal #0F766E as the accent. Do not introduce a different dominant brand colour in designed overlays or title cards.

Review evidence: Inspect graphic backgrounds, text panels and overlays. Do not classify ordinary photographic colours as palette violations.

Rule 04 — Typography

Severity: Medium **Check type:** visual

Requirement: Use Inter for headings and Inter or Arial for body text. Do not use more than two font families in a single designed frame. Keep text overlays legible and avoid decorative script fonts.

Review evidence: Inspect readable text overlays in sampled frames. If the font cannot be identified visually, do not claim a specific font mismatch.

Rule 05 — Video safe area

Severity: Medium **Check type:** visual

Requirement: Keep logos, essential text and calls-to-action inside the central 80% of the frame. Do not place essential information within the outermost 10% along any edge.

Review evidence: Inspect sampled frames for text or logos cut off or placed too close to the frame edge.

Rule 06 — Video format and orientation

Severity: Medium **Check type:** metadata

Requirement: For short-form vertical social video, export in a 9:16 aspect ratio at 1080 × 1920 pixels where the publishing platform supports it. If a lower-resolution draft is submitted for review, flag it as a draft-specification issue rather than assuming it is publish-ready.

Review evidence: Use video metadata to check dimensions and aspect ratio. Do not infer visual quality from resolution alone.

2. Content, speech and caption standards

A caption is not a transcript, and a transcript is not proof of what appears in every video frame. Apply each rule only to its designated evidence source.

Rule 07 — Opening hook

Severity: Medium **Check type:** transcript_and_caption

Requirement: The first sentence of the social-media caption must state the topic or audience benefit clearly. The opening spoken line should introduce the subject within the first 5 seconds.

Review evidence: Evaluate the caption's first sentence separately from the first 5 seconds of the speech transcript.

Rule 08 — Caption structure

Severity: High **Check type:** caption

Requirement: The social-media caption must contain a clear opening hook, one or two concise supporting sentences and a relevant next step. Put the primary call-to-action before any platform truncation point or 'Read more' expansion.

Review evidence: Evaluate only the submitted caption. Do not require a caption CTA to be spoken in the video.

Rule 09 — Caption length and readability

Severity: Low **Check type:** caption

Requirement: Keep standard campaign captions between 30 and 120 words unless the campaign brief specifies another length. Use short sentences and natural language. Avoid excessive capitalisation and repeated punctuation.

Review evidence: Count caption words and inspect sentence readability. If no caption is supplied, mark this rule not assessable.

Rule 10 — Spoken language

Severity: Medium **Check type:** transcript

Requirement: Spoken narration must be clear, respectful and understandable to the intended general audience. Avoid insults, discriminatory language and unsupported claims. Do not penalise a transcript for punctuation or spelling artefacts that may have been introduced by automatic speech recognition.

Review evidence: Evaluate transcript meaning. Treat uncertain proper nouns and low-confidence recognition as requiring human verification.

Rule 11 — Product and performance claims

Severity: High **Check type:** caption_and_transcript

Requirement: Do not state or imply guaranteed results, market leadership, exact financial outcomes, user counts or performance statistics unless the same claim is supported by an approved campaign brief or evidence supplied with the review.

Review evidence: Check claims in both caption and transcript. A number or superlative alone is not proof of falsity; request evidence or mark it unverified.

Rule 12 — Names, facts and attribution

Severity: Medium **Check type:** caption_and_transcript

Requirement: Spell company, product, artist and platform names using the approved campaign source. Attribute quotations and third-party facts accurately. Do not silently replace an unclear spoken name with a guessed spelling.

Review evidence: Compare names against supplied reference material. If no reference is available, flag uncertain transcription for human verification.

Rule 13 — Hashtags and tagging

Severity: Medium **Check type:** caption

Requirement: Use no more than five relevant hashtags. Tag a client, partner, artist or location only when the campaign brief explicitly identifies that entity and provides its approved handle. Never invent a handle or tag.

Review evidence: Inspect caption text and any clearly visible tags. Missing tags are a violation only when the campaign brief identifies a required tag.

3. Accessibility, audio and publication quality

Rule 14 — Accessibility — captions

Severity: High **Check type:** visual_and_audio

Requirement: Videos containing speech must include accurate, synchronised on-screen captions. Captions must not obscure the logo or essential visual information. Use high-contrast text against its background.

Review evidence: Inspect sampled frames for visible subtitles and contrast, and compare a sample of subtitles with the transcript. A full synchronisation check requires the complete video.

Rule 15 — Accessibility — audio meaning

Severity: Medium **Check type:** audio_and_visual

Requirement: Do not communicate essential information through sound alone. Include the essential message in visible text or in the accompanying caption where practical.

Review evidence: Compare key spoken information with visible text or caption. Mark partial-frame evidence as limited.

Rule 16 — Audio technical quality

Severity: Medium **Check type:** audio

Requirement: Narration must be intelligible, with no obvious clipping, severe distortion or prolonged unintended silence. Background music must not make the spoken message difficult to understand.

Review evidence: Use audio metrics as screening signals and listen to the audio for confirmation. RMS, silence and clipping measurements alone do not establish intelligibility.

Rule 17 — Music and asset rights

Severity: High **Check type:** human_verification

Requirement: Use only music, footage, images and other assets that the campaign owner has documented as owned, licensed or otherwise approved for the intended channel and territory.

Review evidence: This cannot be confirmed from audio or video inspection alone. Require an asset-rights declaration or supporting documentation; do not claim a track is licensed based on sound recognition.

Rule 18 — Spelling and grammar in published text

Severity: Medium **Check type:** caption_and_visual_text

Requirement: Review the final caption and readable on-screen text for spelling, grammar and typographical errors before publication. Preserve intentional product names and approved stylised spellings.

Review evidence: Check caption text and readable overlays. Treat speech-recognition spelling as uncertain until checked against the audio.

Rule 19 — Call-to-action accuracy

Severity: Medium **Check type:** caption

Requirement: The caption's call-to-action must be relevant to the content and must not contain a fabricated URL, offer, deadline, discount, product feature or promise.

Review evidence: Inspect the submitted caption and compare any offer or destination with supplied campaign evidence.

Rule 20 — Post-publication engagement

Severity: Low **Check type:** post_publication

Requirement: After publication, the channel owner should review and respond to relevant audience comments within the first business day, following the community-management playbook.

Review evidence: This is an operational check. It cannot be verified from an uploaded video or caption; assess it only from platform analytics or a human checklist.

4. Evidence and review protocol

Source separation

Evaluate visual rules from video frames or supplied images; caption rules from the caption; spoken-language rules from the transcript; audio rules from audio evidence; metadata rules from file metadata.

Sampled-frame limitation

A review based on selected frames is a sample, not a frame-by-frame certification. Findings should identify sampled evidence and avoid claims about unseen moments.

Speech-recognition uncertainty

Preserve the raw transcript. Unclear proper nouns, low-confidence words and possible recognition errors must be marked for human verification rather than silently corrected.

Not assessable

If required evidence is absent, return not assessable or human verification required. Do not convert missing evidence into a confirmed violation.

Violation evidence

Every confirmed violation should identify the rule, source (caption, transcript, frame, audio or metadata), observed evidence and a practical correction.

Human decision

AI analysis is advisory. A designated human reviewer must approve or reject the review before publication.

5. Suggested test scenarios

Scenario	Expected behaviour
Logo at top-centre	Flag Rule 01 if visible in sampled frames.
Correct logo but wrong overlay colour	Check Rule 03 against designed overlays, not natural footage.
Caption has no CTA; speech has a CTA	Flag Rule 08 based on the caption. Do not use spoken CTA as a substitute.
Caption has CTA; speech has no CTA	Do not flag missing caption CTA solely because speech lacks one.
Whisper mishears a platform name	Mark uncertain name for human verification; do not assert a spelling violation from ASR alone.

Scenario	Expected behaviour
No evidence of comment response timing	Rule 20 is not assessable from uploaded media.
Audio metrics look normal	Do not claim speech is intelligible without listening or further evidence.

End of document. BrandGuard AI should treat this document as the approved policy source for this test organisation. A campaign-specific brief or approved asset reference may add evidence but must not silently override these rules.
